Hi Darrin,

Thanks for your email. Would it be possible to arrange a conference call tomorrow among all of us sometime to discuss? I have a toll free conference line that we can use. I can make a call work any time tomorrow.

Thanks,

Wendy

Subject: Re: Questions from irrigators

Thanks for this Julie. I have cc'ed our Water Specialist, Perry Cabot, and our contact at the EPA, Wendy O'Brien, on this email as well.

I can formulate a list of question today or tomorrow, but I feel as if it may be wise to at least offer a Q&A session for irrigators from the Animas. It would be ideal to have folks from the EPA (or other organizations of knowledge) and Perry there to at least provide some guidance.

Best case scenario is this week, as irrigators will be needing to apply water, especially to annuals and potted material, as soon as possible.

If everyone could respond with availability we could get this under way and I can send something out.

Cheers

Darrin

Hi Darrin,

Can you compose a list of questions of relevance to irrigators and agriculturists that I can circulate?

We have Sens. Bennet and Gardner here and they heard from 3 people about the need for guidance to irrigators, ditch companies, and produce growers.

FYI - pH has returned to normal in the City. We don't have data on what is suspended in the water yet. Mountain Studies Institute is collecting samples and seems to be turning it around pretty quickly, but every sediment has to be collected, and then allowed to settle for 48 hours, I believe. So all tests on particulate take awhile.

Also could you call me re: CSU contact when you have time?

Thanks.
